# Varnish Enterprise Managed Services

A turnkey private CDN service fully managed by Varnish Software

**Varnish Managed Services helps enterprises deploy and run a highly scalable private CDN, customized to their requirements and maintained 24/7 by Varnish experts.**

Varnish Managed Services is a dedicated private CDN service with the convenience of a turnkey solution that's optimized for specific, business-critical needs and runs on dedicated infrastructure.

**Varnish Managed Services** offers enterprises the shortest route to the benefits of a private CDN, such as better performance, greater flexibility and stronger privacy, without adding HR or operational overheads.

It frees up time to work on core business, knowing that CDN operations are in expert hands.

The Varnish support team deploys, runs and maintains the service full time, handling routing, scaling, upgrades and integrations.

**Varnish Managed Services** combines the convenience of a commercial CDN with:

- The ability to choose edge server location
- The freedom to optimize for specific use cases
- Total control over infrastructure
- Dedicated hosting with no service sharing
- Flexible SLAs for dialling support up and down
- Customizable edge logic

# Benefits

## Performance

Much higher performance than off-the-shelf CDNs, with lower latency, higher capacity and more features.

## Flexibility

Choose PoP locations, hardware and the support levels you need.

## Privacy and security

Run a secure CDN on dedicated hardware for maximum privacy and control, with no service sharing.

## Simplicity

Plug-and-play deployment of a turnkey CDN solution that's customized to your requirements, run 24/7 by Varnish experts.

## Transparency

Full transparency into your CDN, with no vendor lock-in, no black-box technology, and greater insight into traffic.

## Cost

Varnish handles more traffic with fewer resources and there are no unexpected CDN traffic costs, resulting in a lower TCO.

## Support

A private CDN that's fully supported by caching experts, with flexible SLAs and 24/7 monitoring.

## Control

Keep control of your traffic, content, PoP placement and support level, for greater insight, agility and QoE for users.

## Varnish Managed Services includes:

- Installation of Varnish Enterprise Private CDN
- Customer-specific integrations
- Design of edge computing logic
- 24/7/365 monitoring and incident response
- Varnish upgrades and updates
- Flexible SLAs
- Dedicated Slack channel
- Troubleshooting and support
- Change management
- Regular service reviews
- CDN optimization

## About Varnish Software

Varnish is a powerful caching technology used by over 10 million websites and the world's largest content, streaming and telecommunications providers, who rely on it to provide lightning-fast web and streaming experiences for huge audiences.
