

Enabling A Stable Remote Work Environment

Challenge:

Businesses of all sizes need to ensure their vulnerable, yet critical infrastructure has the bandwidth to handle the massive surge in demand for remote working.

Current Concerns:

43+%

43+% of knowledge workers in the US already work at home some of the time.

2x

Akamai Networks have seen twice as much traffic as normal peak traffic loads during COVID-19*

+++

The strain on internet infrastructure and threaten business uptime, availability and access

1900%

Zoom video conferencing has seen an increase of 1900% in daily active users from Dec

Questions To Consider:

Can your sites, apps, tools and systems scale to meet increased demand?

Can you ensure that only those who need to sign into business sensitive tools can do so?

Do you have appropriate security in provisions like firewall, VPN, secure transport, and cache encryption in place?

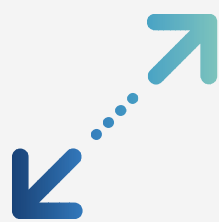

Have you optimized your environment to ensure high-performance content delivery for all types and levels of traffic?*

Varnish Software's solutions enable:

Rapid scalability

Flexibility

Increased uptime and availability

Deliver to more, faster, with fewer resources

Improved access control

Greater security

Enhanced performance

Improved agility and preparedness
